SUMMARY

Motivated IT student with hands on experience on full-stack web development for almost 4 years. Has a strong fundamental knowledge on HTML, CSS and JavaScript, Gained experience with multiple web frameworks and technologies. Proven ability to develop software solutions particularly an ERP for a business, a mobile and web employment platform, and a faculty information and communication system. Focused on developing scalable applications with a strong emphasis on user interface and user experience.

TECHNICAL SKILLS

Category	Skills
Frontend Technologies	Flutter, Bootstrap, Tailwind CSS, React, Next.js, shadcn/ui
Backend Technologies	Python (Django, NumPy, Pandas, Matplotlib, PyQt), PHP (Laravel), Node.js (Express.js, NestJS), RESTful APIs
Databases	SQL, MongoDB, Supabase
Version Control	Git, GitHub, Bitbucket
Quality Assurance	Selenium, Postman

EXPERIENCES

Papiverse: Franchise Management System for Krispy Papi | 2025

- User Interface Development: Design and implement a responsive web interface to support franchise operations across multiple devices.
- Data Extraction & Processing: Supported the extraction and processing of sales-related data from existing systems to enable reporting in the absence of direct system integrations using Django and Pandas through RESTful API integration.
- Data Organization & Quality: Assisted in structuring and cleaning business data to improve accuracy, consistency, and usability for operational reporting.
- System Communication Features: Participated in implementing real-time communication and notification capabilities to support timely information sharing within the system.
- Process Improvement: Collaborated with the team to analyze and streamline business workflows through improved data organization and system support.
- Cross-Functional Collaboration: Worked closely with technical team members and stakeholders to ensure the system aligned with franchise business requirements.

PESO Mendez Cross Platform Employment Application | 2025

- Cross-Platform System Development: Contributed to the development of mobile and web-based applications to support the digitization of employment and hiring processes.
- Process Digitization & Data Management: Assisted in transforming manual employment workflows into structured digital processes to improve data accuracy and operational efficiency.

- Role-Based Access Control: Implemented role-based access to ensure appropriate system permissions for administrators, employer, and job seekers.
- Automation & System Support: Implemented system features to reduce manual document preparation and streamline applicant data handling.
- Reporting & Compliance Support: Supported the generation of employment-related statistics and reports required for DOLE and institutional compliance.
- Database & System Integration: Worked with relational databases (MySQL) to store and manage employment records and system data in a structured and reliable manner.
- Document Management: Handled digital files and records required throughout the hiring process to ensure organized and accessible documentation.

Faculty Connect: Faculty Information and Management System | 2025

- Front-End Application Development: Developed and maintained the user interface of a web-based faculty management system with emphasis on usability, responsiveness, and design consistency.
- Content & Information Presentation: Implemented structured front-end views to support the display of announcements, events, and institutional information.
- Data Visualization & Monitoring: Designed user interface components to present financial and contribution-related data in a clear and organized manner.
- Responsive & Accessible Design: Ensured the application delivered a consistent user experience across devices and supported accessibility for diverse users.
- System Integration Collaboration: Worked closely with backend developers to integrate front-end components with system services and ensure accurate data representation.
- Stakeholder Collaboration: Coordinated with team members and institutional stakeholders to refine features and align the interface with academic requirements.

DigiCog: Gaming Community and Game Showcase Website | 2024

- Led a team in developing a Laravel-based game showcase platform with integrated community and communication features focusing on appealing UI and structured games presentation
- Implemented game listings, user profiles, and discussion functionalities.

Calzada: E-Commerce Website | 2024

- Led a team in developing a Django-based e-commerce website named *Calzada*.
- Implemented core features such as product management, user authentication, cart, and checkout flow.

University Student Registration System | 2023

- Built a Python Tkinter-based student registration system for managing basic student records.
- Used string manipulation and Excel files for data storage and retrieval.

EDUCATION

Bachelor's Degree in Information Technology, Cavite State University. *September 2023 – September 2026*
